

## SPECIALIST BESPOKE UNITS

PD Edenhall is a name more traditionally associated with bricks and Cast Stone. However, following the acquisition of two well-established precast concrete businesses, namely Boyland Concrete and Grecon, a subsidiary company, **Edenhall Concrete Ltd**, was established.

A major element of Edenhall Concrete's business is based around non-standard, specialist bespoke units. We have the experience, the knowledge, the expertise and the capacity to achieve a satisfactory solution to all your precast concrete needs. Our capabilities range from small units to comply with manual handling regulations right up to large structural elements up to 40 tonnes in weight such as bridge beams, which require craneage facilities. Our customers, though traditionally associated with the construction industry, do flow over into specialist niche markets. We feel that concrete is an exceptional material, unique in its flexibility and suitability for use in a variety of applications in terms of high performance, standards and specialist aesthetic effects.

We have standard mix designs to cover a range of traditional concrete colours using carefully selected natural aggregates. In addition we have the facility to match any colour with the use of more specialist aggregates, sometimes also incorporating synthetic iron oxide pigments. Over the years we have also supplied a multitude of specialist finishes incorporating secondary processing techniques carried out by our skilled craftsmen. The resultant products and finishes maximise the aesthetic appeal of the units and offer the complete package to service the client's needs.
