

**Engineering Faculty Building,
Burton College,
Burton-upon-Trent**

The project consisted of over 2,000 pieces of handcrafted cast stone delivered and installed. This included ashlar blocks, window cills, heads, arches, copings, feature band courses and bespoke units, including 5-metre length arched heads with integral keystone feature.

The column capping blocks give the impression of supporting the feature brickwork above with fixings for precision attachment to the structural steelwork.

The splayed springer units and associated angled panels were fitted between the arches to form a continuous stone façade at the ground floor.

This level of ashlar masonry consisted of alternate courses of standard and rebated blocks to give depth and texture.

Such was the input at the design stage, there was no cutting of any masonry feature during the build programme.
