

**Harrow Weald,  
Middlesex**

Acid etched Portland reconstructed stone. These spiral staircases, complete with wrought iron balustrades, were supplied to all the public areas of the this very prestigious development of apartments.

Each flight is supported on only three points. All designed, manufactured and installed as a package.

Whilst circular stairs are used quite often this particular type are less usual. The smoothly flowing underside is the most expensive feature as it is not developed from a sheet material, however, when descending it is the most visually noticeable. Edenhall Concrete Ltd are always willing to advise on the best way of achieving economies but recognise that sometimes only the best will be good enough and will help the customer obtain their ideal.

Another point of interest that can be overlooked with semi-circular stairs when there are no site applied finishes is that of transport. Purpose made steel frames will be required to enable the units to be laid for stacking, storing and hauling. It is the cost of these add-ons which result in a circular flight costing at least ten times the cost of a straight flight, however the value enhancement will far outweigh the additional cost.
