

**Windsor, Berkshire**

Sixty flights designed, manufactured and installed complete with handrails. An unusual design with no visible means of support beneath the upper end. A refurbishment contract for the tenants of a housing association that required the removal of the existing defective flights and installation of the new with a minimum of disruption to the tenants. Naturally there were many varieties of 'rise' and of course both left- and right-hands.

Slip resistance was provided by a raised exposed aggregate panel to each tread leaving a smooth margin for water discharge. Reconstructed stone was used to simulate a mellow 'Bathstone' to avoid any appearance of conventional concrete.

The Client, Windsor Housing Association, were able to source these from us without the services of the more conventional Architect, Main Contractor and Structural Engineer.

Edenhall Concrete Ltd always try to provide the solution to a Customer's problem even when this requires much more than the simple supply only of reconstructed stone.

A 'one-off' contract for a potential customer will receive our full attention and, unlike other manufacturers, if a product can only be packaged in a more extensive manner then we will endeavour to help
