

Bridge Beams, Oxford

The largest units delivered from our Wareham yard during 2003 were eight 35 ton bridge beams delivered to suit night timed road closures. A contract time of eight weeks from receipt of full details to completion of delivery is the very shortest contract time that items of this nature can normally be achieved.

Although these units were of a finish to suit their environment we would have been just as prepared to offer a more exotic aggregate or finish. The choice rests with the customer.

Whilst 10-ton units are within the capability of our in-house equipment, it is common practice for us to hire-in whatever size crane is needed. With the number and type of yards available within the group it is fair to say that we have the space, we have the equipment and we have the expertise to manufacture whatever the customer requires.

With very large units like these beams it should not be forgotten that the lifting alone can be expensive; four lifting shackles to connect the crane chains to the beam will cost close on £2,000.
