

Cambridge Business Park

Curved and straight cladding panels were used on this contract to create an impressive entrance to the estate. Smooth faced curved panels decreasing in height whilst traversing the periphery of a circle necessitated helical-shaped copings. Such details, whilst relatively normal to Grecon Boyland, can appear to cost a disproportionate amount, and the general public often may not realise the Architect's and Developer's commitment to achieving a particular visual effect. However, when the overall end result is so striking we are always pleased to have assisted in the minor details and manufacture.

An individual sign for each tenant was provided in reconstituted stone complete with stainless steel fastenings and polished natural stone capping. Again, whether simulated or even a combination of both natural and simulated stone, Grecon Boyland will be pleased to supply.

All supplies on this work were also installed as a complete package, ensuring that any minor problems that may have developed were overcome with the minimum of fuss and disruption.
