

Portsmouth Road, Esher, Surrey

Wet cast structural reconstructed stone was used to form an elegant entrance detail to this office development together with matching boundary copings and cappings. Circular work of this nature is common practice to a number of our works, and whilst naturally more expensive than straight work when averaged over the whole supply on any particular contract, the enhancement value to the property will far exceed the extra cost. It should be noted that properly designed wet cast reconstructed stone will be maintenance free.

We also supplied over 200 other matching wet cast units including curved lintels, jambs and cills.

Whilst most units were installed by the site bricklayers, we installed the more complex curved canopy and balustrade as a service to our customer.

The curved balustrade, although primarily an aesthetic feature, obviously needs, like all balustrades, to be completely safe. In this particular case it is achieved by means of a steel rail embedded in the underside of the capping. Although balusters and cappings can be purchased from many suppliers not all of them will involve themselves in the integrity of the finished product. Edenhall Concrete Ltd will be pleased to consider all aspects of any particular arrangement on request.
